### Summarise data using numbers

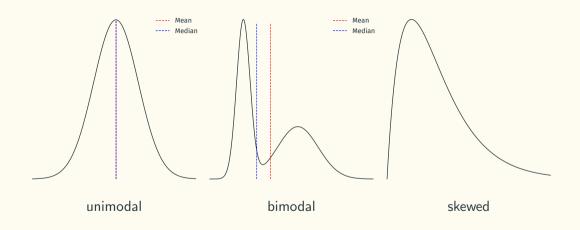

- Central tendency (mean, median, mode)
- Extremes (smallest, largest)
- Range
- Interquartile range (IQR)
- Dispersion (variance, standard deviation)

$$\bullet \ \ \text{Arithmetic mean:} \ \ \bar{x} = \frac{x_1 + x_2 + x_3 + \dots + x_{n-1} + x_n}{n} = \frac{1}{n} \sum_{i=1}^n x_i$$

• Median: the 50th percentile

• Mode: the most frequent values

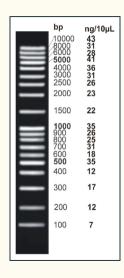

|  | Mean | Median | Mode   |
|--|------|--------|--------|
| 1, 2, 3, 4, 5, 6, 7, 8, 9              | 5    | 5      | Χ      |
| 2, 3, 5, 7, 7, 7, 11, 13               | 6.89 | 7      | 7      |
| 2, 3, 5, 7, 7, 7, 11, 13, 100          | 16.2 | 7      | 7      |
| 2, 2, 2, 5, 6, 100, 100, 100, 103, 104 | 52.4 | 53     | 2, 100 |
| 2, 3, 4, 5, 6, 100, 101, 102, 103, 104 | 53   | 53     | X      |

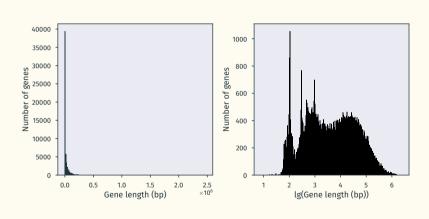

Geometric mean: 
$$GM = \sqrt[n]{x_1 x_2 x_3 \cdots x_{n-1} x_n} = \left(\prod_{i=1}^n x_i\right)^{\frac{1}{n}}$$

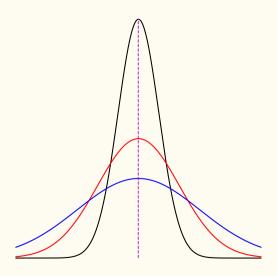

$$\bar{\log}x = \frac{1}{n} \sum_{i=1}^{n} \log x_i$$

### Log scale in biology

# Dispersion

### Dispersion

• Variance: 
$$var = \frac{1}{N} \sum_{i=1}^{N} (x_i - \bar{x})^2$$
 or  $\frac{1}{n-1} \sum_{i=1}^{n} (x_i - \bar{x})^2$ 

• Standard deviation:  $\sqrt{var}$ 

#### **Grouped data**

Transcription factor binding motif length (bp):

Mean:

### **Grouped data**

| Motif length (bp)   Absolute frequency |    | Relative frequency |  |
|--|----|--------------------|--|
| 11                                     | 10 | 0.5                |  |
| 13                                     | 7  | 0.35               |  |
| 16                                     | 2  | 0.1                |  |
| 17                                     | 1  | 0.05               |  |
| Total                                  | 20 | 1                  |  |
|  |    |                    |  |

### Weighted average

| Value           | Absolute frequency |
|-----------------|--------------------|
| $x_1$           | $f_1$              |
| $x_2$           | $f_2$              |
| $x_3$           | $f_2$              |
| :               | :                  |
| :               | :                  |
| $x_{n-1}$       | $f_{n-1}$          |
| $x_{n-1}$ $x_n$ | $f_n$              |

$$\bar{x} = \frac{x_1 f_1 + x_2 f_2 + \dots + x_{n-1} f_{n-1} + x_n f_n}{f_1 + f_2 + \dots + f_{n-1} + f_n}$$

$$= \frac{x_1 f_1 + x_2 f_2 + \dots + x_{n-1} f_{n-1} + x_n f_n}{\sum_{i=1}^n f_i}$$

$$= \frac{f_1}{\sum_{i=1}^n f_i} x_1 + \frac{f_2}{\sum_{i=1}^n f_i} x_2 + \dots + \frac{f_n}{\sum_{i=1}^n f_i} x_n$$

$$= w_1 x_1 + w_2 x_2 + \dots + w_n x_n = \sum_{i=1}^n w_i x_i$$

### Weighted average

#### Grading system:

| Attendance | Quizzes | Assignments | Mid-term exam | Final exam |
|------------|---------|-------------|---------------|------------|
| 10%        | 10%     | 10%         | 30%           | 40%        |

#### Pixel luminance:

$$0.2126 \times R + 0.7152 \times G + 0.0722 \times B$$

$$0.299 \times R + 0.587 \times G + 0.114 \times B$$

### Weighted average

A badly manufactured dodecahedron die

| Values | Relative frequency |  |
|--------|--------------------|--|
| 1      | 8%                 |  |
| 2      | 5%                 |  |
| 3      | 5%                 |  |
| 4      | 5%                 |  |
| 5      | 5%                 |  |
| 6      | 10%                |  |
| 7      | 10%                |  |
| 8      | 10%                |  |
| 9      | 10%                |  |
| 10     | 12%                |  |
| 11     | 10%                |  |
| 12     | 10%                |  |
|        |                    |  |

We roll the die repeadly for a large number of times. What will be the average number?

### Summary of descriptive statistics

```
Tables (absolute/relative frequency table)

Graphs (Bar chart, pie chart, histogram, box plot, line graph, scatter plot)

Data presentation

Numerical measures

Dispersion (variance, standard deviation)

Others (range, IQR)
```

New way of calculating mean: weighted average  $\bar{x} = \sum_{i=1}^n w_i x_i$
